Subject: Wise Co.Coal Fired Plant

Please consider going to a coal fired plant. I physically drove the coal fired plant that Wise County already has at Carbo. When you visit it in person it is a real and significant thing. You can smell and see the plant and what it has done to the surrounding communities.

I had thought about taking pictures but a lawyer friend said what you ought to do is take a picture of the communities surrounding the power plant.

I grew up around house and families like mine who used coal to heat their homes. Do you know the quality of the air around a house or houses that burn coal? Do you know about the dirt that comes out of a coal fired plant? What it does to your houses, cars, plants our lungs?

I suspect you do. I ask you to help start this country in a new direction and say we right now must do something different to protect our little planet and its people.

Thank you.

Randy Gilmer

born and raised in Scott County VA and have been a resident of the adjoining county of Wise now for over 20 years.

I love to be able to have a clear sky to see our beautiful mountains and to breathe clean air. Thank you for helping the rural people of Wise County, of VA, of the USA, of the world.
